Art Unit
1637

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Jun 6, 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-62, 64-66, and 68-70 is/are pending in the application.
- 4a) Of the above, claim(s) 1-28 and 43-54 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 29-42, 55-62, 64-66, and 68-70 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claims _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
*See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s). _____ 6) ☐ Other:

Art Unit: 1637

DETAILED ACTION

1. The amendment filed 6/6/2003 has been entered. Following the entry of the amendment, claims 1-62, 64-66 and 68-70 are pending. Claims 1-28 and 43-54 are withdrawn as non-elected group from further consideration.

Rejections and/or objected from the previous office action are hereby withdrawn. The following rejections are either newly applied or reiterated. They constitute the complete set presently being applied to the instant application.

2. This application contains claims 1-28 and 43-54 drawn to an invention nonelected with traverse in Paper No. 4. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 29-34, 36-38, 41-42, and 55-56 are rejected under 35 U.S.C. 102(b) as being anticipated by Varma (5,622,826).

Varma discloses immobilizing molecules on surface of platinum, glass or aminated polypropylene (See column 2, lines 48-51). The invention is directed to a method for

Art Unit: 1637

immobilizing nucleic acid on a platinum surface (See column 2, lines 62-63). Varma also discloses that a hybridization experiment is performed on a platinum surface containing immobilized probes. The probe can be labeled and derivatized or non derivatized (See column 4, lines 36-41). The hybridization complex with labels is detected (See column 4, lines 47-56). The oligonucleotide probes are spotted on a platinum surface (typically 300nL per sport) and then the platinum chip is allowed to air dry at room temperature (See column 7, lines 49-59).

Thus, the teachings of Varma anticipate the limitations of claims 29-34, 36-38, 41-42, and 55-56.

The response argues that Varma does not teach a modified surface which is obtained by introducing a functionality selected from a group consisting of an amino group, a carboxyl group, a thiol group and their derivatives, while Varma teaches the modification of a surface of a platinum, glass or aminated polypropylenes with isocyanate or isothiocyanate (See Abstract, column 2, line 51 to column 3, line 35). However, Varma teaches that molecules bearing an amino group or functionality are immobilized on platinum surface by first reacting such surfaces with either an isocyanate or an isothiocyanate to produce immobilized reaction moieties on the surface (See column 2, lines 51-55). The instant claims are not limited to isocyanate or isothiocyanate which reacts on the surface to produce immobilized reactive moieties on the surface. Thus, Applicant's arguments filed 6/6/2003 have been fully considered but they are not persuasive. Therefore, the rejection is maintained.

5. Claims 64-66 and 68 are rejected under 35 U.S.C. 102(b) as being anticipated by Fareed et al. (4,970,144).

Art Unit: 1637

Fareed et al. disclose that a method of detecting a polypeptide contained in a sample comprising the steps of providing a modified substrate (See column 10, lines 19-29). A probe polypeptide that can form a complex with the target polypeptide, contacting either the probe or target polypeptide to a surface of the substrate to form a probe assay article or a target assay article, contacting the probe assay article or target assay article with the probe peptide or target peptides to form a complex comprising the probe and the target polypeptides and then detecting and determining the presence of the complex (See column 11, lines 34-57). A protein solution is air-dried on the bottoms of wells (See column 11, lines 43-43 and column 13, lines 65-68)) The test antigen can be 10-100 nanogram (See column 11, lines 38-43). It is inherent to the limitations of claim 68.

The response argues that Fareed et al. do not teach the limitations that a functionality selected from a group consisting of an amino group, a carboxyl group, a thiol group and their derivatives is introduced to modify the surface of the substrate. However, Fareed et al. teach that the immobilized antibodies may be covalently or physically bound to the solid phase immunoabsorbent, by techniques such as covalent bonding via an amide or ester linkage or by absorption (See column 10, lines 25-29). Although Fareed et al. do not explicitly teach the functionality selected from a group consisting of an amino group, a carboxyl group, a thiol group and their derivatives for immobilizing a probe or target polypeptide, the amide or ester linkage used by Fareed et al. produces an amino group or carboxyl group used in immobilization of biopolymer.

Art Unit: 1637

The response also argues that Fareed et al. do not disclose immobilizing the probe or target of polypeptide or biopolymer on the modified surface without additional fixing steps. Since the newly added language “without additional fixing steps” is not limited by the claim language and the language “without additional fixing steps” is not defined in the specification the language is interpreted as any steps to immobilize biopolymer on the modified surface. Thus, Applicant's arguments filed 6/6/2003 have been fully considered but they are not persuasive. Therefore, the rejection is maintained.

Regarding the unexpected discovery of the present invention, the response mistakenly argues that the evidence for the unexpected discovery is presented in Varma's reference (See pg. 8, fourth paragraph of the response). However, it is required by Applicants that if it is an unexpected discovery of the present invention that modified substrates, such as plasma-aminated polypropylene and polystyrene substrates are capable of direct and stable adsorption of polypeptides without the need for additional fix steps, the evidence is needed to be presented.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

Art Unit: 1637

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 39-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Varma et al. (5,622,826) as applied to claims 29-34, 36-38, 41-42, 55-56 and 63 above, and further in view of Cremer et al. (6,197,501).

The teachings of Varma et al. are set forth in the section 4 above and Varma et al. do disclose fluorescence labeling and applying CCD camera.

Cremer disclose that the hybridization sample are detected by labeling the nucleic acid with fluorescent labels (See column 5, lines 8-16). CCD camera is used to detect the fluorescence signals (See column 5, lines 59-67).

One of ordinary skill in the art would have been motivated to apply fluorescence labeling on nucleic acid molecules and CCD camera to detect the fluorescence signals because with fluorochromium marked nucleic acid the sample sequence can be directly detected after washing steps. Thus, it would have been prima facie obvious to apply fluorescence labeling on nucleic acid molecules and CCD camera to detect the fluorescence signals.

As discussed in section 4 above, the teachings of Varma anticipate the limitations of claim 29. With the same reason in section 4, the rejection is maintained.

Art Unit: 1637

7. Claim 35 is rejected under 35 U.S.C. 103(a) as being unpatentable over Varma et al. (5,622,826) as applied to claims 29-34, 36-38, 41-42, 55-56 and 63 above, and further in view of Rampal et al. (6,013,789).

The teachings of Varma et al. are set forth in the section 4 above and Varma does not disclose using the enzyme substrate to detect the polypeptide.

Rampal discloses a method for attaching pre-synthesized oligonucleotides to a polypropylene support medium which is aminated (as recited in claims 29-31 and 41-42) and that the invention is used to construct oligonucleotide arrays for hybridization assays (See the Abstract) (as recited claim 29 and 32-33). The labeling would be the biotinylation of a target or the detection oligonucleotide in which the biotin moieties bind to an avidin-enzyme conjugate (See column 9, lines 20-26) (as recited in claim 34). The label can also be fluorescent compounds (See column 9, lines 26-28) (as recited in claim 34). To detect biotinylated oligo target, the enzyme substrate, ELF, was used and the signals were detected by a CCD camera (See column 11, lines 13-27).

One of ordinary skill in the art would have been motivated to apply the enzyme substrate, ELF to the method of Varma because the detection by using the enzyme substrate, ELF as target by Rampal can be reached completion by 15 minutes (See column 11, lines 30-31). It would have been prima facie obvious to apply ELF detection method to the method of Varma.

As discussed in section 4 above, the teachings of Varma anticipate the limitations of claim 29. With the same reason in section 4, the rejection is maintained.

Art Unit: 1637

8. Claims 57-62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Varma et al. (5,622,826) and claims 68-70 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fareed et al. (4,970,144).

The teachings of Varma et al. are set forth in section 4 above and the teachings of Fareed et al. are set forth in section 5 above.

None of the references above discloses specifically the amount probe or target biopolymer contacted with the substrate, the aliquot amount of the probe or target needed, the time needed for drying as claimed.

However, it would have been prima facie obvious for an ordinary skill in the art at the time of the instant invention to modify the reaction condition of Varma et al. and Fareed et al. by optimizing the an amount of the probes or target biopolymers used and the time for air drying the target biopolymer on the surface of substrate because optimization of a reaction condition was routine practice in the art at the time of the instant invention. Moreover, since the amount of polynucleotide or polypeptide used as claimed is in a common range and the time needed for drying the sample is also in a common range it would have been prima facie obvious for an ordinary skill in the art to choose these concentration as claimed.

As discussed in sections 4 and 5 above, the teachings of Varma anticipate the limitations of claim 29 and, the teachings of Fareed et al. anticipate the limitations of claim 64 . With the same reason in sections 4 and 5, the rejection is maintained.

Art Unit: 1637

NEW GROUND REJECTIONS AS NECESSITATED BY AMENDMENT

Claim Rejections - 35 USC § 112

9. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

10. Claims 29-42, 55-62, 64-66 and 68-70 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Since the newly added language “without additional fixing steps” has no support in the specification and there is no discussion regarding the benefit of “without additional fixing steps” to immobilize biopolymer on the modified surface in the specification, it constitutes new matter.

11. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

12. Claims 29-42, 55-62, 64-66 and 68-70 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a. Claims 29-42, 55-62, 64-66 and 68-70 are vague and indefinite because it is unclear what is the definition of the language “without additional fixing steps” in the specification. It appears

Art Unit: 1637

that the language “without additional fixing steps” means “without chemical crosslinking” in the specification (See pg. 3, lines 28-29). However, it is unclear what is definition of “without chemical crosslinking” in the specification. Clarification is required.

Summary

13. No claims are allowable.

14. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

15. Any inquiries concerning this communication or earlier communications from the examiner should be directed to Joyce Tung whose telephone number is (703) 305-7112. The examiner can normally be reached on Monday-Friday from 8:00 AM-4:30 PM.

Art Unit: 1637

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Benzion can be reached at (703) 308-1119 on Monday-Friday from 10:00 AM-6:00 PM.

Any inquiries of a general nature or relating to the status of this application should be directed to the Chemical/Matrix receptionist whose telephone number is (703) 308-0196.

16. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Art Unit 1637 via the PTO Fax Center located in Crystal Mall 1 using (703) 305-3014 or 308-4242. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989).
